## Tapeworms and Ascaris

(From: "The Cure for HIV and AIDS", p. 34ff)

### Tapeworm Disease

We all have tapeworm stages in our bodies, probably going back to childhood when we ate dirt. It is not normal for these stages to hatch and develop further. Their purpose is to stay dormant. And perhaps they do little harm this way.

But I have found that all HIV/AIDS sufferers have "tapeworm disease". The stages are hatching. This spews the tiny larvae and cysts, plus unfertilized eggs and their bacteria all over the body, making you feel sick. Perhaps the large amounts of solvents accumulated in the body forces them to hatch; perhaps the lowered immunity allows them to hatch. The Syncrometer usually detects scolices (heads) and eggs in the most vital organs: the thymus, spleen, bone marrow, brain and liver.

Tapeworm stages that have disseminated in your body do not come unaccompanied, either. They bring some very harmful bacteria and viruses with them. Streptomyces fungus is one of the worst. Wherever I detect Streptomyces, a tapeworm stage is not far away.

The herbal parasite program is not effective against all tapeworms. [In the old editions of the books Dr. Clark used to recommend Rascal against tapeworms.] The zapper can't reach every one either. Other traditional herbs, such as pumpkin seed or male fern, are helpful, but the most effective treatment I have found is Co-enzyme Q10.

It takes a very large amount, 3000mg, to reach tapeworm casts in far away places like the brain or bone marrow. This is 3 grams. If you are extra tall or heavy, it takes 4 grams [over 155 pounds]. Co-enzyme Q10 is normally present in every cell of your body. It is never toxic and there are no side effects. But its cost is prohibitive to take on an ongoing basis. Plan not to re-infect yourself again so that one dose is enough. You could re-infect yourself by eating rare meats or dairy products.

If you are very ill, take the large definitive dose every fifth day until you are better. If you are HIV positive but you are not ill, take it once a week. On other days take a smaller dose, about 400mg. To get its full potency, take it on an empty stomach, such as before breakfast. You may open the capsules and eat the powder straight or stirred into pure honey (1/4 tsp.). Don't eat dozens of capsules. The capsules themselves could have an unexpected toxin. If you are not HIV positive, you could reserve the large dose for times of illness, taking the large dose once a week until you are well.

### Tough Tapeworms

But killing the tapeworm larvae still might not end your tapeworm disease! A few varieties of tapeworms, like Echinococcus multilocularis, have larvae inside their larvae! An even those second generation larvae can have more larvae inside them. These internal larvae are shielded from all things that might harm them. That is undoubtedly why they are not eradicated by the zapper current or herbs or even Co-enzyme Q10. The innermost larvae are called hydatid sand. Testing with a Syncrometer reveals that in some persons, unfortunate enough to have these tapeworm varieties, hydatid sand is still present and alive after all these treatments. E. granulosis is the most common variety to survive it all. It is found the world over, infesting sheep, cattle, pigs, horses, goats and dogs.

But what harm would a few left over stages of tapeworms do? With most of them dead, surely your health should improve. In themselves, they may do little harm. But Streptomyces which accompanies the larvae, does a great deal of harm. Streptomyces can spread through your body like a virus, attacking your weakened organs such as the thymus.

Streptomyces is not merely a nuisance, like Candida. Streptomyces makes protease! It uses up your nucleic acid bases, adenine and hypoxanthine; it makes nitrites out of nitrates; it makes ammonia out of your urea; it has powerful immune suppressant action on T-cells. This is no ordinary invader although it is present in the soil everywhere.

Unless you kill every grain of the hydatid sand and other leftover shielded larvae, you cannot get well. At the same time, the cyst must not be opened to let out the mischief-makers, but merely penetrated to kill the contents. Fortunately, we have found a combination of two things that can penetrate a succession of membranes to kill the shielded larvae within, as well as any trapped eggs. They are cysteine and ozonated olive oil. We will discuss them shortly. But first, are there other parasites besides some tapeworms that can survive our treatments so far? Yes. Ascaris. If you do not get well after the herbal parasite program, Co-enzyme Q10, and the zapper treatment, you can assume you have either leftover tapeworm stages or survivor Ascaris eggs.

### The Curious Case of Ascaris

Ascaris infests animals and humans from pole to pole of this planet. It is safe to say that all dogs and cats have it and all humans have it from time to time. Domestic animals and humans each have their own variety of Ascaris, yet can host the other varieties, too. Horses have Ascaris megaloccephala. Pigs have Ascaris suum. The human variety is Ascaris lumbricoides. Ascaris does not attach itself to you, it hardly even moves. It simply lies still in your organs absorbing nutrients and eventually filling up with eggs.

When you kill Ascaris worms by zapping or with the herbal recipe, they are mortally wounded. They are dying, but the eggs inside them are not. They were sheltered. Within a day these eggs begin to leave the dying worm. Soon hordes of eggs are dispersing in your body again! And in another 24 hours they are beginning to hatch into larvae. You can detect this as it happens with a Syncrometer and test slides of eggs, larvae, and adults.

Of course, you are zapping and taking the herbal parasite killers. But again, these do not penetrate the Ascaris body to kill what is inside. It could take a few weeks for the dead Ascaris to be totally disintegrated so no more eggs are being sheltered within.

Surely, a few Ascaris eggs, still escaping into your body could not do much harm since the overall problem has been greatly reduced! This is not so. The eggs may even do more harm than the worms. Ascaris eggs bring 3 very important pathogens that spread throughout your body: Rhizobium leguminosarum, Mycobacterium avum/intracellulare, and the common cold virus, Adenovirus. A flood of these are responsible for your night sweats! As soon as the last Ascaris egg is gone, these pathogens are gone, too, and the following night becomes free of sweating. If your night sweats come back, you know Ascaris eggs are present again. And in 24 hours, unless you kill them, they will hatch into larvae and start the whole cycle over again.

It takes about 3 weeks for large parasites like Ascaris and tapeworm larvae to disintegrate completely and be cleared from your tissues. If eggs or scolices are continually released during this time, the cycle of infection cannot be broken. Fortunately, the same two things that can penetrate tapeworm larvae can also penetrate Ascaris worms and mop up after them, whether dead or alive!

### Strangle the Stragglers

**Here is the Mop-up Program for both tapeworm larvae and sheltered Ascaris eggs. It is done AFTER the Parasite Program while still doing the Maintenance Program:**

- Ozonated olive oil, 3 tbs. taken in the morning
- L-cysteine, 500mg, 3 capsules 2 times a day. Do not take within 5 hours of the ozonated oil. It would counteract the effect of the oil.
- Tape-Parakill Essential Oil blend
- Buy a small ozonator to make your own ozonated oil. [Call Superior Health Products at 1-800-700-1543 and order the PortaZone Ozonator]

You can easily make your own ozonated oil. Purchase an ozonator and a small bottle of olive oil. [Call Superior Health Products at 1-800-700-1543 and order the PortaZone] Pour off an inch or so. Attach an aerator to the end of your ozonator hose and drop it to the bottom of the olive oil bottle. Choose a ceramic or wood aerator, available at any pet store; the plastic varieties release benzene! [Superior Health Products has a tested and approved aerator in stock] The bubbles may make the oil flow over the top. In this case, pour more of it off. Turn the ozonator on before dropping the hose in the bottle. Ozonate for 20 minutes or longer. When done, cap the bottle and store in the freezer until you are ready to use it. It melts quickly when needed. After 5 days of use, ozonate again to restore potency. Would other oils work? Possibly. I have not researched them, though, since they cannot be trusted to be free of benzene pollution.

Ozonated oil gives you no noticeable side effects, but it should be taken no more than necessary. One could expect the ozone to jump across from oil molecules to your fat molecules, aging them too soon. Fortunately, the dose is small and may be directed at the intruders before it is directed at you.

Taking Cysteine can give you side effects, perhaps due to its penetrating antiparasite property. If you have serious side effects, reduce the dosage. Even if you reduce the dosage, do not take it longer than 3 weeks. Most persons get no side effects. But the more parasitized you are, the more side effects you could have: fatigue, loss of appetite, nausea. Remember, animals that are being deparasitized have similar symptoms. I have not yet found a way to counteract these symptoms, so it is wise to drink lots of water while taking it, **take vitamin C and vitamin E, 400mg, one a day.**

Vitamin E will counteract the over-oxidation produced temporarily by the ozonated oil. Take it two hours or more after the ozonated oil to make sure there is no loss of the oil's potency.

Also, alkalinize yourself with **1/2 tsp. baking soda at bedtime** since all sulfur compounds will acidify you. Be patient. Usually, all side effects disappear in a few days, but in difficult cases they may last a week. Make sure to eat regular meals in spite of appetite loss. You must not allow yourself to lose weight, even for one week. Taking a capsule of vitamin B1, 500mg, with each meal helps with appetite.

Cysteine has other important benefits for you. It counteracts the radiation we all get from living on this planet, called "background radiation". This might even explain why supplementing animals with cysteine had the effect of lengthening their lives substantially. Cysteine is a heavy metal detoxifier, perhaps through the formation of glutathione. It is a precursor to glutathione and deserves a permanent place on your supplement list. Nevertheless, supplementing with cysteine should not be overdone. After taking 6 capsules daily for 3 weeks (plus baking soda at bedtime), go off it completely for one week.
